# Control All Aspects of Your Production Accounting

Pandell PetroNet is web-based oil and gas production accounting software built for Canadian oil & gas producers.

Benefits

Full Production Accountability and Web-Based Controls
Access PetroNet with any web browser anytime, anywhere. With duplicate data protection, secure user roles, and a simple to use interface, PetroNet streamlines your workflow allowing your team to be more productive and prioritize work based on reporting.

Drill Down with Robust Reports
Ensure you're seeing the whole picture by analyzing reports from a company level view down to well/partner level. Produce up-to-date government reports including EUB requirements and Crown Royalty Imports, and sync data with Alberta Registry and other government authorities to make sure your data is compliant.

Link PetroNet Data Directly with your Financial System
Pandell PetroNet allows you to bring in data from third-party systems such as well tests, measured production, receipts and dispositions, and more. Easily export the data into your financial system or to Excel with a single click.

Features

Operated / Non-Op Properties
Oversee all aspects of well / battery production, sale & inventory data. Import non-op volumes and revenues as well as sales taken-in-kind.

Sales Splits
Each facility / well can facilitate multi-contract splits, and prepare pipeline and partner split reports with direct email and fax.

Revenue Reports
Data entry by purchaser allows for visual balancing to the total amount received from each purchaser, in addition to balancing each facility and contract.

Royalties and DOIs
Manage royalties and DOIs with included utilities to copy and handle mergers / acquisitions of partners.

Configurable Security
Easily allow certain users to see the whole picture and restrict those who shouldn't with user-defined security & hierarchy.

Streamlined Workflow
Overcome workload issues caused by increased well counts, labour shortages, and stricter government deadlines, all while monitoring the monthly process.

Government Reporting
PetroNet features built-in reporting functionality to ensure compliance with Alberta, BC, Sask, Manitoba and Indigenous regulatory authorities. Automatically calculate crown royalties, pipeline splits, and more.

No Maintenance Required
Save your team the hassle and let Pandell host, update, maintain your installation of Pandell PetroNet as well as providing routine backups.
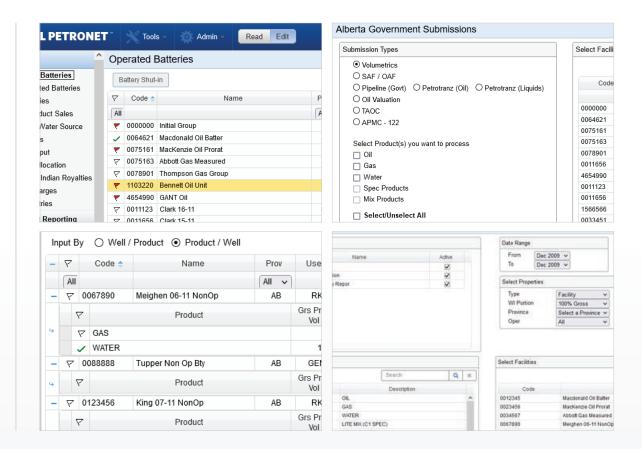

Minimal Training
The simple, intuitive interface makes it easy for your team to get up and running quickly, with Pandell support staff just a phone call away if you need it.

Additional Features

- Full well / battery lifecycle summary
- Calculation using WGR / GOR
