Wholesale EDI Management

Our Wholesale EDI Management is SaaS; combining a high level of service with simple, flexible customer interface options.

Overview

The need for secure, reliable information transfer between pipelines and their trading partners has become increasingly critical. To meet this challenge, ESG developed its Pipeline Automation Service, specifically designed to help trading partners, pipelines, and storage facilities meet the GISB/NAESB Internet communication and EDI file format requirements.

Flexibility, Affordability and Security

Our PAS service can be narrowed or broadened to match transaction volumes, budgets, & system interfaces. We can deliver reliable communications at a fraction of the cost of in-house solutions. We also manage all aspects of message security, including SSL certificates and PGP/GNUPG key management.

Reliability, Accessibility and Experience

We provide 24-hour support, with cloud-based high availability, disaster recovery, and business continuity. Our EDI Scoreboard provides on-line visibility to all EDI transactions and can be searched by date, trading partner, transaction type, status, account number, and more.

Single Point of Contact for EDI

Files received from trading partners arrive at the HTTP server encrypted in EDI file format. The file is decrypted using customer's PGP Private Key. The decrypted EDI file is translated and forwarded with the Message Interface to the Customer Information System. Outbound files follow the reverse process.

QuickNom

For operators of gathering, midstream and interstate natural gas pipelines, QuickNom® Pipeline Management is a cost-effective system for managing daily processes and activities. Features include Nomination and Confirmation scheduling, Measured Volumes, Operational Balancing Agreements, Shipper Imbalances, Contracting Rates, reports and Invoicing.

NGI

The Natural Gas Storage Management System is an inventory management system that provides all the key information needed to manage storage facilities and hubs. Automated processes result in administrative efficiencies and increased customer satisfaction. Features include Storage Nominations and Confirmations, Scheduling Customer Inventories, Parks, Loans, Wheeling and Other Storage Services.

QuickTariff

QuickTariff acts as a "packager" for eTariff filings, bundling together user-supplied Tariff revisions with stored Tariff parameters. Quick Tariff maintains all FERC-required Tariff "meta data" and uses filing wizards so that creating an eTariff filing is quick and complete. All filing elements are validated and combined into an XML file for simple eTariff submission.

COPS

Crude Oil Pipeline System (COPS) provides the operators of crude oil pipelines with a straightforward, cost-effective system for managing key pipeline processes and activities. Features include Nominations, Confirmations, Scheduling, Shipper Management, Measurement, Inventories, Invoicing & Deductions.

PAS

Pipeline Automation Service (PAS) is a service which can be broadened or narrowed to match transaction volumes, budgets, & system interfaces. The service delivers reliable communications while ESG manages all aspects of message security. Features include Customer Inventories, Parks, Loans and Wheeling services.
